We make our sheds in Vermont. All of the siding on the cedar shed is western red cedar. The siding is interlocking to maximize protection (AKA Tongue and Groove). Exposed nails are stainless steel so you will never see gray lines on your shed. Those lines are caused by the metal used in galvanised nails. We use stainless steel nails and screws. The frame of the shed is 2x3 with 3/4" flooring and 2x4 floor joists. The structure sits on two 4x4 pressure treated beams creating a long lasting infrastructure lasting many years. The roof on the shed is metal, made from 26 gauge galvalume (a painted metal alloy used specifically for roofing). The roofing material is the same seen on quality homes here in the northeast kingdom. The process for putting the roof on is simple but extremely durable. Finally, if you would like, we will seal your shed with a cabot cedar stain. Cedar is known for it's resistance to rot and weather so sealing is more of a choice than a necessity.

# Quality Sheds

*Durabilty that lasts and lasts..*

We want to thank you for taking the time to find out a little about us and our sheds. In the future we plan to offer a sustainable harvested line. This meansthat you will be sure thatthe shed you enjoy having in your yard will also be availableto your grandchildren. Only trees that are from managed lots with certification are harvested. We know that this is one way to help protect our resources and continue to provide a great shed for our customers.
